

Go to github.com

Open your browser and go to the public GitHub home page. Then continue with the recorded steps in this guide.

`https://github.com/`

WHAT HAPPENS NEXT

01 **Select the ClickTrail repository**

Find hctorfrs17-tech/ClickTrail on GitHub.

02 **Open the v0.2.1 release**

Use the Releases link in the repository sidebar.

03 **Download the official ZIP**

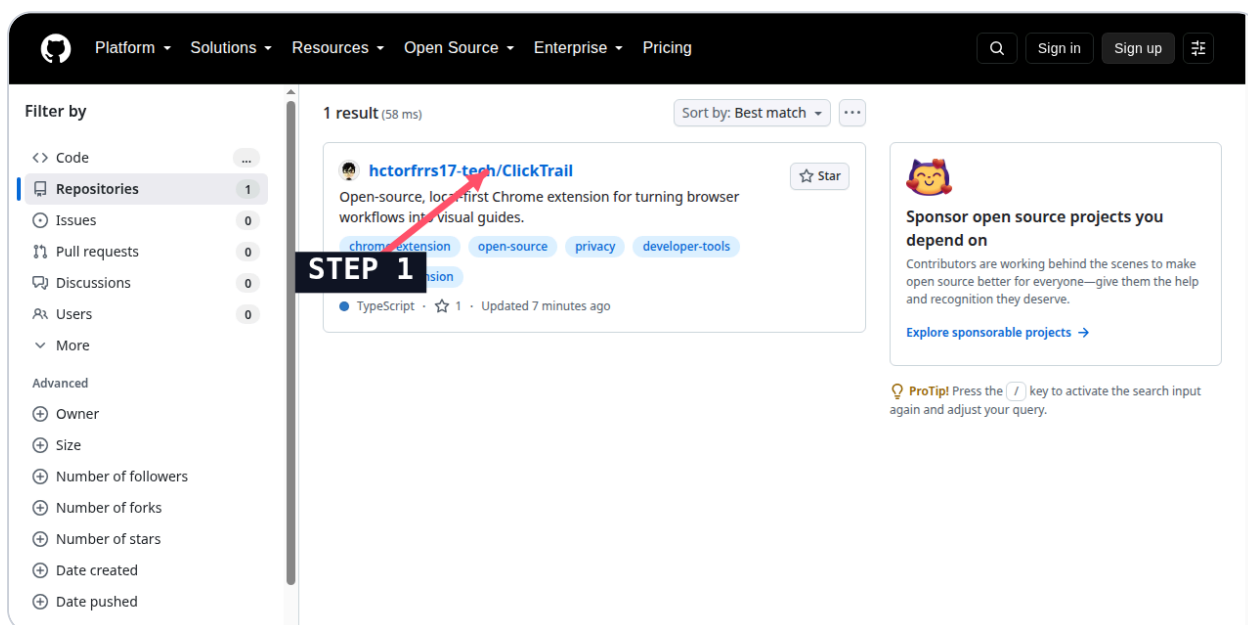

Select clicktrail-chrome-extension-v0.2.1.zip.

No Chrome internal page is captured. ClickTrail begins safely on the first public URL and keeps the guide local.

Open GitHub, find ClickTrail, and download the official ZIP

01 Select hctorfrs17-tech/ClickTrail

ClickTrail clicked on the hctorfrs17-tech/ClickTrail page.

02

Open the ClickTrail v0.2.1 release

In the repository sidebar, select the ClickTrail v0.2.1 release.

ClickTrail ⚡

Record a browser action. Let local Ollama write the instruction. Export a visual PDF with an exact click pointer.

03

Select clicktrail-chrome-extension-v0.2.1.zip

Select clicktrail-chrome-extension-v0.2.1.zip on the recorded page.

Before recording

1. Install Ollama and run `ollama pull gemma3:1b`.

2. Start Ollama with `OLLAMA_ORIGINS=chrome-extension://*` configured for Chrome extension access.

3. Extract the ZIP, open `chrome://extensions`, enable **Developer mode**, and select **Load unpacked** on the folder containing `manifest.json`.

Chrome cannot load the ZIP directly; extract it first. ClickTrail works entirely on the computer where Ollama runs.
